* Turbo Warrants may knock out at any time as long as the underlying price source provides quotes/ticks in accordance with the base prospectus and the respective final terms which are available free of charge on this [website](#). A knock out of the Turbo Warrants is also subject to the opening hours of Spectrum Markets as specified on the website of [Spectrum Markets](#). The times mentioned in CET are indicative. As a rule, the trading hours (including all auctions) of the reference exchange/home exchange on which the respective underlying is quoted are decisive for a knock-out, even if these lie outside the time period specified above. For example, a Turbo Warrant on the DAX can generally be knocked out between 09:00 – 17:30. However, deviations are possible if, for example, trading continues after 17:35. due to an extended closing auction on XETRA. In this case, prices after 17:35. can also lead to a knock-out. The same may apply to all other underlyings. Deviations may also occur as a result of time changes (summer and winter time).
